# Product Owner

Since January 2024, ZenDiS has been working on openDesk, commissioned by the German Federal Ministry of the Interior and Community, collaborating closely with German public administration, established open source companies, and strong European partners.

The Centre for Digital Sovereignty of Public Administration (ZenDiS) GmbH strengthens the Digital Sovereignty of the German government. It supports the public sector in reducing its critical dependencies on individual IT providers and provides access to modern, powerful, and scalable open-source solutions.

# Service Provider

B1 Systems acts as service provider for openDesk, handling the integration of the various components. We oversee the development of the software and ensure that its components work together seamlessly. We are also responsible for quality assurance and maintenance to ensure that openDesk runs smoothly.

B1 Systems supports companies of all sizes in designing, operating, and managing complex open-source and Linux landscapes. Our focus is on the areas of cloud, containerisation, system and configuration management, virtualisation, and monitoring – from the initial proof of concept through to support for existing solutions. We also offer training, consulting, and support services.

# Cloud Plattform

To support as many companies and public institutions as possible in their sovereign digital transformation, we are establishing a digital ecosystem for the use of cloud computing, including integration with openDesk.

STACKIT GmbH & Co. KG enables Europe's Digital Sovereignty through a reliable cloud platform, providing an alternative to the offerings of non-European cloud providers. The STACKIT cloud platform enables value creation, innovation and growth for companies and public institutions.

# Documents

Collabora Online adds a powerful collaborative office suite to openDesk, supporting all major document, spreadsheet, and presentation file formats. We provide you with the tools needed to keep your documents secure and GDPR-compliant, all without compromising on features.

Collabora Productivity provides Collabora Online, a feature-rich and compatible open-source solution for editing and collaboration, as well as a range of other products and consulting services to enterprises and governments. Powered by the largest team of certified LibreOffice engineers in the world, it is a leading contributor to the LibreOffice codebase and community.

# Chat

Element is the real-time communications component within openDesk, providing sovereign and secure communications, including voice and video calling.

Element Software GmbH develops a secure and sovereign communications solution for large public sector organisations, based on the Matrix open standard. Our solutions include the Bundeswehr's BwMessenger, NATO's N12CE messenger and Germany's TI-Messenger for the healthcare sector.

# File Storage

In openDesk, Nextcloud provides real-time access to files with desktop synchronisation, mobile access and the ability to edit files, share them, comment on them and track activities.

Nextcloud Hub is the leading open-source, on-premises content collaboration platform that enables privacy-compliant collaboration. It offers a unified platform for collaboration, including document sharing, real-time editing, video conferencing, and more, with a seamless user experience across mobile, web, and desktop interfaces.

# Video Conferences

Nordeck stands for real-time collaboration in openDesk. Extensive video conference features, whiteboards for moderated meetings and online workshops, real-time decisions in the team and online OpenSpace events can be carried out with the NeoToolsuite.

Today's workspace requires cross-functional, networked collaboration in order to tackle complex challenges that ask for innovative solutions. It is becoming increasingly important to become independent of proprietary systems. Nordeck IT + Consulting GmbH develops software that promotes collaboration, is user-friendly, and provides space to create new solutions for an optimal team experience.

# Projects

OpenProject brings comprehensive project management features to openDesk, enabling teams to manage their projects efficiently throughout the entire project lifecycle, from project planning to execution. Key features include project portfolio management, planning and scheduling with Gantt charts, issue management, agile boards, and time and cost tracking.

OpenProject develops open source project management software for classic, agile, and hybrid project management. Backed by a strong international community, the Berlin-based company continuously releases new software versions and provides hosting, as well as enterprise services and support for its customers.

# Email

OX App Suite is a comprehensive solution for companies and public authorities to efficiently, flexibly and productively meet their communication needs. The basic components OX Mail, OX Calendar and OX Contacts are seamlessly integrated into openDesk.

Open-Xchange GmbH was founded in 2005 with the philosophy and goal of keeping the Internet free and open as it was originally intended. Open-Xchange has always focused on email and today offers some of the world's most popular email services, from email servers (Dovecot) to email platforms (OX App Suite).

# Identity Management

With Nubus, Univention provides the identity management and web portal components for openDesk, ensuring the technical integration of all openDesk modules into a cohesive solution and convenient access through a single user interface.

Univention GmbH develops open source software for the central management of digital identities and rights, as well as for the integration and simple provision of IT services via web portals. Openness, scalability, and ease of use are as central as digital sovereignty and data protection.

# Wiki

As part of openDesk, XWiki offers a knowledge management and collaboration component, while CryptPad has been integrated with the Diagram module for end-to-end encrypted, real-time collaboration.

XWiki SAS offers services and solutions based on two open source projects: XWiki enables organizations to organize and find information efficiently, save time and money, and enhance collaboration with its collaborative knowledge management solution. CryptPad is an end-to-end encrypted, real-time collaborative office suite addressing the need for privacy.
